DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 3-6 and 10, drawn to an optical diffusing plate for use in a liquid crystal display, classified in class 349, subclass 112.
- II. Claims 2 and 7-9, drawn to a particular chemical compound used to form an optical diffusing plate, classified in class 428, subclass 1.1.

Currently, claim 1 appears generic.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the optical diffusing plate can be formed of other material. The subcombination has separate utility such as forming other optically birefringent films such as compensators and polarizers.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
